

TAYLOR®

INDOOR/OUTDOOR WALL THERMOMETER

- Large, easy-to-read numbers
- Durable resin material with recessed tube
- Weather resistant
- Temperature range: -40°F to 120°F / -40°C to 50°C

EXPOSURE: 

Do not mount in direct sunlight, near a heat source, or near a large body of water as these situations could affect the proper air temperature reading. Ultraviolet light from sunlight can prematurely weather the product.

WALL MOUNTING

SEPARATED FLUID:

Occasionally, rough handling in shipment or improper storage may cause the red liquid to separate slightly. This is not a defect. The liquid can be reunited easily before installation. First, remove from the card. Tap the side of the thermometer, bulb end down against the palm of the hand. Pause between taps to permit liquid to run down tube. Continue until liquid is completely joined.

REJOINING SEPARATED FLUID
